Online distance learning is an instructional system which connects learners with educational resources. Students work on their own at home, at work, or at school and communicate with faculty and other students via e-mail, electronic forums, videoconferencing, chat rooms, bulletin boards, instant messaging and other forms of computer-based communication. There are both advantages and disadvantages to online distance learning.

There are many benefits to using online distance learning environments. Online education is available all the time and anywhere. However, there are drawbacks for some learners. The online learner only has the written text and no other face to face cues. **This** may confuse the learner and cause misunderstanding. While distance learning allows for openness, it is also cumbersome because it is done by e-mail messages and writing and therefore may take more time than face-to-face learning. The sheer bulk of messages can sometimes be overwhelming for many online students.

Universities, colleges and schools use virtual online distance learning environments. These are important for students who may be unable to attend classes for various reasons like illnesses or busy everyday schedules. Some learners just want to further their studies at home. They enjoy the convenience of home learning as they take regular programs or enrichment classes.

Online courses keep learners very occupied at all hours. There is a great deal of messages and other online resources to read and respond to. Most learners have regular jobs or attend regular school classes on ground as well. However, the benefits are clear. Online distance learning is becoming very popular. Some virtual online classes have become a profitable business as they replace regular traditional means of learning.

**Read the following passage and choose the best answers to the questions.**

In many ways, the increasingly rapid **pace** of climate change is a direct result of the growth of the human population. In the last 100 years, the world population has more than tripled. Obviously, this has meant that the world has needed to produce three times as much food, energy, and other natural resources.

In addition, the average person uses more energy and natural resources than the average person one hundred years ago, meaning that the rates of **consumption** are actually much higher than just the increase in population would imply.

All of these activities: food production, energy usage, and the use of natural resources, contribute to climate change in some way. The greater amounts of oil and other fuels burned to create energy release chemicals which add to global warming. In order to produce more food, farmers cut down trees to gain more land for their fields. In addition, we cut down trees to build the houses needed for a larger population. Those trees are an essential part of controlling global warming.

In addition to a growing population, the world also has a population that desires a higher standard of living than in the past, and a higher standard of living requires the use of even more natural resources. For example,

China is the world's most populous nation, with 1.3 billion people. Currently, the standard of living for most of those people is far below that of people in first world nations. Therefore, the average Chinese citizen uses far fewer natural resources and less energy than the average citizen of the US or Japan. If every Chinese person attains a first world lifestyle, the amount of energy and natural resources needed in the world will double, even if the standard of living in every other nation on Earth remains the same as it is today.

**Question 41:** Why does the author discuss China, Japan and the United States?

- A. To compare the standards of their citizens.
- B. To explain why China will not be able to become a first world nation.
- C. To better illustrate the effects of an increase in standards of living.
- D. To explain why the world's use of energy will need to double soon.

**Question 42:** The word "consumption" in the passage is closest in meaning to \_\_\_\_\_.

- A. usage
- B. increase
- C. population
- D. development

**Question 43:** According to the passage, how does the standard of living affect global warming?

- A. The use of natural resources is directly related to the standard of living.
- B. First world nations create less population than developing nations.
- C. High standards of living lead to increases in world population.
- D. Higher standards of living are better for the environment.

**Question 44:** According to the passage, how does food production contribute to global warming?

- A. Food production requires that the forests should be cleared to create farmland.
- B. Food production decreases the ability of the air to release heat.
- C. Producing more food leads to growth in the world population.
- D. Food production uses many chemicals which add to global warming.

**Question 45:** The word "pace" in the passage is closest in meaning to \_\_\_\_\_.
